

ServerLink Infinity KVM

The ServerLink range of KVM (keyboard/video/mouse) switches allow you to take full control of multiple computers or network servers with just one monitor, keyboard and mouse. There is no software to load – just plug in your computers, plug in your monitor, keyboard & mouse and you're ready to go. All ServerLink KVM switches are hardware only solutions, totally independent of software and network operating systems. This ensures hassle free installation and error free switching & booting.

All ServerLink KVM switches feature user-friendly pop-up screen menu control yet require absolutely no software. The On-Screen-Display enables you to rename your computers to make selection quick and simple. Select any computer directly from your keyboard using simple hot-key commands. Computers can also be selected via a switch on the front panel.

The quality of your KVM switch cables directly affects the video quality displayed on your monitor. ServerLink KVM switch cables are moulded 3 in 1 cables with connectors for monitor, keyboard and mouse. Every ServerLink KVM switch cable is made from high quality componentry and uses individual coaxial cables for each RGB signal, minimising interference, signal degradation and ghosting.
